## RECOMMENDED SOLDERING PATTERN

## ◆ Approximate expression for Circuit load capacitance

$$CL = C_g \times C_d / (C_g + C_d) + C_s \text{ (pF)}$$

Cos : 32kHz\_IN-32kHz\_OUT Stray capacitance

Cgs : 32kHz\_IN-Vss Stray capacitance

Cds : 32kHz\_OUT-Vss Stray capacitance

## ◆ Notes for the design of Circuit board

Please keep the wiring short and place Quartz Crystal, Condenser, and Resistance close as possible to Microchip microcontroller. In order to prevent interference with other signal lines, do not provide other signal lines, please do not provide other signal lines on the crystal mounting part (bottom surface).

## ◆ Notes

The above evaluation results are reference values evaluated in the specific sample, and the contents are not guaranteed.

Please note that in the actual circuit board, the value of the external element capacitance and the characteristics may change depending on the difference in stray capacitance and so on.
